

Advanced Instrumentation for Nano-Analytics

The "Advanced Instrumentation for Nano-Analytics" (AINA) group focuses on the development of scientific instruments based on charged particle beams and laser beams and correlative workflows taking advantage of these instruments. The group's R&D activity covers fundamental investigations, instrument development and application development. The targeted fields of application of the instrumentation and methodologies developed by AINA are:

- nano-imaging
- nano-analysis
- in-situ process control for nano-fabrication
- neutral gas, plasma & liquid flow diagnostics

Our research activities are performed in cooperation with leading international instrument manufacturers and with research groups specialized in the relevant fields.

Main expertise fields

- [Nano-analytics](#)
- [Charged particle optics](#)
- [Laser optics](#)
- [Vacuum and laser gas technologies](#)
- [Instrument development and prototyping \(including mechanics, electronics, software development\)](#)

Research challenges

The development of innovative characterization tools is of paramount importance to advance the frontiers of materials science. Due to the ever-increasing complexity of devices and continuously shrinking geometries in materials science and engineering, the characterization tools and techniques are facing new challenges and need to anticipate future trends:

- The development of new hardware to improve following aspects of nano-analytics:
 - Lateral resolution
 - Sensitivity
 - Throughput
 - Automation
- The development of correlative workflows to maximize information by combining results from different, complementary techniques
- The development of new algorithms and software to deal with the increasing complexity of data and to prepare for automation of data treatment
- The aforementioned developments need to be applicable to the fields of:
 - materials science
 - life sciences
 - and beyond

Application areas

- [Instrumentation for correlative microscopy](#)
- [Instrumentation for nano-plasma](#)
- [Correlative microscopies and applications in materials science and life sciences](#)
- [Data treatment and visualization for correlative microscopy](#)
- [Particle - matter interactions for ion microscopy](#)

Main assets

- Experienced and multidisciplinary team
- Expertise covering the full spectrum required to turn innovative concepts and ideas into prototype instruments
- Long-term collaborations with world-leading instrument manufacturers
- Strong patent portfolio in the fields of focus

Equipment

- 2 Zeiss ORION NanoFab HM equipped with in-house developed SMS, STM, etc.
- 1 Thermo Fisher Scion Quattro equipped with in-house developed SMS
- 1 Thermo Fisher TFS F20 TEM equipped with in-house developed SMS
- 1 Prototype MS for field-portable and space applications
- 1 SMS for fundamental studies and component testing (CMS)
- 1 In-house build re-STM microscope for ion transmission studies (Gaileo)
- 1 Test benches for charged particle optics instrumentation
- 1 specialised glove box for cryo preparation and sample transfer purposes
- 1 prototype coherent X-ray Bragg scattering laser (2.5 J/pulse, 100Hz chirp rate)
- 1 Continuum Powerlite (2.8J @1064 nm, 1J @532nm)
- 1 Scan Precision scan (2000000)
- 1 Topica Femtoflow ultra 2050
